## Simplify the management of your print fleet

MULTIBRAND SOFTWARE

D>>ENSE
Print, breathe !

1 . Availability of equipment

The consumables in a multifunction printer have a varying lifespan, and when you have a large number of printers, this can be a complex issue. Anticipating the life of consumables can save a considerable amount of time.

Automatic control
- Consumables catalogue with order references
- Management of consumables and wear parts
- Automatic ordering with customisable thresholds
- Routing of orders to different suppliers according to a choice of criteria
- Customised order forms
- Local stock management with replenishment
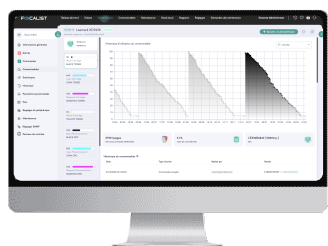

Focus on end-of-life consumables
- Proactive management of consumables based on usage history
- Just-in-time replacement of consumables at end of life

Technician alerts
- Customisable notifications for different types of events
- Partners have their own dedicated portal enabling them to monitor all their customers
- Alert filtering based on severity and keywords

2 . Cost optimisation

Certain redundant tasks, such as machine inventory, reporting or even ordering or receiving consumables, can be automated. This time saved will allow employees to concentrate on high value-added tasks.

Predictive management of consumable end-of-life
- Order thresholds expressed in days remaining
- Allowance for seasonal variations
- No more over-anticipated orders for devices that print little
- Optimum choice of consumables (supplier, capacity)

Fine adjustment of thresholds according to the type of consumable and for the most frequently used devices

Local stock replenishment mode and installation instructions
- Differentiated thresholds between order and installation, enabling local stock to be used
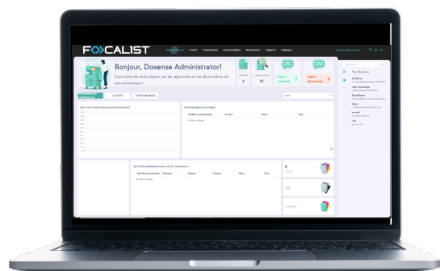

Our philosophy

Simplicity

Safety and security

Innovation

3 . Knowledge of the print fleet

Knowing your print fleet gives you a clearer picture of how your machines are being used, so you can reduce your printing costs.

Most companies don't have the resources to create these reports manually, and need simple, flexible ways of presenting this information accurately.

Automatic fleet inventory
- Discovering connected peripherals
- Support for USB-connected personal printers
- One or more silent agents to be installed at the customer's site
- Automatic assignment of devices to different sites
- Track device movements

Creation of operational and customisable dashboards

Detailed reports on the history of consumable changes
- Detection of cost overruns:
  - Consumables replaced too early
  - Consumable permutations between printers
  - Abnormal coverage rates
  - Block suspicious orders
  - Justification of manual orders
  - Follow-up from delivery to installation of consumables

Easy construction of customised reports
- Powerful tool for creating customised reports and scheduled distribution
- Reports in the form of lists, pivot tables or different types of graphs
- Integration of different reports in dashboards

DOXENSE

Services & Support

1. Support based in France: a team of experts at your service for incident resolution or software upgrades.
2. Remote or on-site training
3. Project management

One of the great strengths of Doxense and its teams lies in their mastery of printing environments and issues. They will support you throughout the life of the project, from qualification and initial reflection through to management, design and deployment in sometimes highly complex environments.

Help centre & documentation

1. Website accessible 24/7
2. Illustrated tutorials and videos
3. Search engine
4. Incident reports
5. Downloads

DOXENSE

About Doxense

For more than 20 years, we've been publishing French and independent print and scan management software. They enable you to anticipate and save money and time, while reducing your environmental impact.

Doxense's software offerings are based on three fundamental pillars: providing relevant and sustainable functionality that meets our customers' challenges, ensuring that the data we collect and report is accurate, and putting security at the heart of everything we do.
