Simplify your print and scan management

MULTIBRAND SOFTWARE

DOXENSE
Print, Breathe !

1 . Document security and availability

Paper outputs and the confidential information they contain need to be protected while guaranteeing their availability where and when the employee requires it. The management solutions themselves must be secure to prevent intrusion and ensure compliance with the RGPD.

Secure printing on demand
- End-to-end flow encryption
- Secure release and follow-me printing
- Authentication by badge, code or QR code
- RGPD compliance
- Solution adapted to mobile users
- Cloud printing support (Chrome OS, ...)
- User-friendly, multi-brand-compatible print interface
Scanning
- User-friendly, multi-brand compatible scan interface
- Scan to folder, to me, to home
- Scan to URL for large files

High availability
- Hardware: printing on nearby MFPs
- Servers: automatic failover in the event of a breakdown

2 . Controlling and reducing costs

To understand, anticipate and control printing costs, you need visibility and tools to monitor and encourage more responsible consumption.

Control
- Monitoring usage and the installed base
- Detailed usage statistics by site, department, user, etc.
- Detailed accounting, budget visibility and decision-making reports

Regulation
- Voluntary or forced printing policy
- Savings calculator to validate your printing policy
- Integrated, customisable reports.

3 . Reducing waste and environmental impact

A large number of printouts are never recovered or are ultimately of no use. On a corporate scale, this can represent a significant environmental impact that companies are seeking to reduce as part of their CSR approach.

Control and visibility
- Environmental audit
- Management of printing policies
- Monitoring and auditing energy consumption

Raising user awareness
- Customised reports
- Interface integrated into MFP screens and spool conversion*.
- My Account page enabling each user to view their printing activity

*Transformation of document printing parameters. Examples: from colour to black and white, from single-sided to double-sided, etc.

4 . Deployment and mobility

The solution needs to be flexible in order to best meet the needs of the largest and most complex networks. It must also be easy to use, so that it is readily accepted and has no impact on day-to-day tasks. It must be able to free itself from constraints and enable mobile working.

Simplified and secure deployment
- Device detection and deployment automation
- Location management
- Multi-site management
- Centralization and signing of drivers
- Automatic deployment of a universal print queue
- Highly secure: regular third-party audits.

User interface
- Add, modify or delete printers
- Print to the nearest printer

Mobile application (bêta)
- User location
- Access to local printers
- Secure release

DOXENSE

Services & Support

1. Support based in France: a team of experts at your service for incident resolution or software upgrades.
2. Remote or on-site training
3. Project management

One of the great strengths of Doxense and its teams lies in their mastery of printing environments and issues. They will support you throughout the life of the project, from qualification and initial reflection through to management, design and deployment in sometimes highly complex environments.

Help centre & documentation

1. Website accessible 24/7
2. Illustrated tutorials and videos
3. Search engine
4. Incident reports
5. Downloads

DOXENSE

About Doxense

For more than 20 years, we've been publishing French and independent print and scan management software. They enable you to anticipate and save money and time, while reducing your environmental impact.

Doxense's software offerings are based on three fundamental pillars: providing relevant and sustainable functionality that meets our customers' challenges, ensuring that the data we collect and report is accurate, and putting security at the heart of everything we do.
